

# BE A GLOBAL HERO

Saving the Planet and becoming more sustainable is one way that we can work to be a hero and save the planet. Braintree is home to the worlds first Electric Forecourt allowing people to charge their Electric cars away from home.

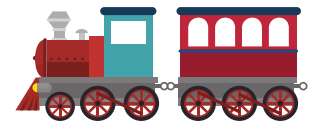

This weeks challenge is to design and maybe make your own sustainable form of transport

## EQUIPMENT

Paper

Pens/ Pencils/ Paint

Recycled household materials

This week we want you to think about energy and the transport for the future. Electric Cars are safer for the environment. Can you think of another way to develop or improve transport for the future in order to save the planet.

Design and label your vehicle explaining how and why it is sustainable or better for the environment. Think about how your vehicle would be powered and how long it would be able to run on that energy

You could then make a model of your vehicle using recycled materials and equipment from around your house.

Don't forget to share your ideas with us by emailing [heros@braintreedistrictscouts.org.uk](mailto:heros@braintreedistrictscouts.org.uk) or posting them to the Braintreedistrictscouts facebook page.
